Work Date/Hours Logs

Date	Number of Hours	Description of work done
Sept 24th 2025	2	Initial Brainstorming for project ideas , and written short description of each idea
Sept 30th 2025	1	Created git repo and read me file
Oct 3rd	1	Initial testing and working around of figma seeing what it is and what it offers
October 8th	1	Requirements gathering creating survey questions
Oct 12th	0.5	Interviewed first person
October 13th	1	Interviewed 3 participants for requirements gathering
October 19th	1.5	Played around in the figma basics to get a better understanding on how to build a nice UI
Oct 20th	0.5	Interviewed 2 people for requirements gathering
Oct 21st	1	First attempt at creating home page of Habit Hub
Oct 22nd	1.5	Interviewed 4 participants for requirements gathering
Oct 22nd	0.5	Started working on requirement gathering paper (
Oct 23rd	1	Working on home page for habithub in figma

Progress Report 2

Oct 24th	0.5	Interviewed 2 participants for requirements gathering
Oct 24th	1	Working on requirements gathering paper
Oct 29th	1	Finishing up the home menu prototype for HabitHub in figma
October 30th	1.2	Finishing up requirements gathering paper
Nov 2nd	0.75	Adding final touches to requirements gathering paper to submit
Nov 5th	0.5	Playing around in figma creating home page for HabitHub
Nov 7th	1	Finishing up a demo of the home page of habit hub
Nov 8th	0.75	Gathering design ideas from online resources (chatgtp and online websites)
Nov 11th	1	Playing around in figma creating UI to see what things designs we can use for our project
Nov 13th	0.5	Starting to create finalized version of the home page on figma

Description of work done:

Fortunately there has been no errors or issues I have encountered this period other than having created a home page in a different figma project, which should be an easy transfer to our project file. This period I have just been learning about new UI designs and how I can use it to benefit our app and add a little “spice” to our application. I believe ramping up figma design process next week is crucial and we can expect to be fully finished our project by then. I did not get to allocate as much time as I intended this period (after requirements gathering) as I had midterms

Progress Report 2

Jayden Prasad

with my classes. Now that I have finished my midterms I can now allocate more time to ramp up UI design in figma.

AI Use Section:

AI Tool Name	Version, Account Type	Specific feature for which the AI tool was used
ChatGPT	ChatGTP 5.1	Gathering ideas and information for UI designing

Value Addition: The main reasoning asking ChatGTP for some UI ideas was just to get a general understanding of some key design implementations that attracts the eyes of our target market. In general we were already planning using basically every method the AI listed before we asked besides the gamified data visualizations. We mainly were looking for colours for parents to help them be able to look around the app easier and ensure they have a simplistic UI design. The value addition we add here is our personal adaptations to the information we gained from the information the AI has given us. The reasoning for the AI prompt was to get ideas on how we can create UI designs and not directly taking exactly what it says and using it.

Appendix:

Input:

I am using figma to design my app called habit hub. This is an application used for parents and kids to track their tasks and routines daily but a gamified version. I did interviews with kids and parents and the enjoyed the gamified aspect of the application. for parents they wanted a simplistic easy and straightforward app design so they can review their kids tasks and routines daily. what are some methods of designing that could meet their needs.

ChatGTP response:

ChatGPT said:

Here are **practical, Figma-friendly design methods** you can use that satisfy **both kids** (fun, gamified, colorful) and **parents** (simple, clear, easy to read, efficient). These are based on real UX patterns for mixed-audience apps.

Progress Report 2

1. Dual-Mode UI (Parent Mode vs Kid Mode)

This is one of the most effective methods.

Why

Kids want colors, animations, gamification.

Parents want simple, clean dashboards and fast navigation.

How to design in Figma

- Create **two versions of each key screen**:
 - **Kid Mode** → bright colors, cute shapes, big buttons, character animations
 - **Parent Mode** → minimal colors, cleaner layouts, simple chart widgets
- A toggle or a PIN unlock switches modes.
- Lock parenting features behind a PIN.

This ensures each user sees UI tuned to them without compromise.

2. Progressive Disclosure (Show only what's needed)

Parents said they wanted something “easy and straightforward.”

This method hides advanced clutter until it's needed.

Examples

- Summary card → “View More” expands into task details
- Parent dashboard → only shows “Today’s Summary”

Progress Report 2

Jayden Prasad
300367841

- Child profile → expandable task list
- Notifications → collapsed into one line “3 new updates”

In Figma

Use:

- Buttons that say **Expand**, **View Details**, **See full timeline**
 - Auto-layout frames with **collapsed vs expanded** variants
 - Component variants for each version
-

3. Visual Hierarchy & Chunking

Parents want easy navigation. Kids want colorful visuals.

How to design

Use **big grouped sections**:

- **Tasks**
- **Rewards**
- **Character**
- **Progress**

Use strong visual separation:

- Rounded cards
- Shadows
- Soft color sections

Progress Report 2

Jayden Prasad
300367841

- Consistent spacing

In Figma, organize using:

- **Autolayout**
 - **Grids (8pt or 10pt spacing)**
 - **Consistent typography (H1, H2, Body)**
-

4. Child-Friendly Gamification Layer (Placed on top)

Instead of mixing gameplay everywhere, place fun elements in specific areas.

Where to gamify

- Character screen
- Level progression
- Rewards shop
- Streak celebrations
- Confetti animation for completed tasks

How to do this in Figma

- Use **motion prototyping**
- Add **micro-interactions** (tiny animations)
- Use **3D-ish gradients or bubble buttons**
- Use **stars, badges, progress bars** but keep them off the parent dashboard

Progress Report 2

Jayden Prasad
300367841

5. Simple, High-Contrast Dashboards for Parents

Parents want straight-to-the-point info.

Parent Dashboard Layout

Top:

- Kid's Name
- Today's Progress Ring

Middle:

- Overdue tasks
- Completed tasks
- Not started

Bottom:

- Quick actions
 - Add routine
 - Edit tasks
 - View history

Design Method

Use the **Card-Based Layout**:

- White cards

Progress Report 2

Jayden Prasad
300367841

- Soft shadows
 - Subtle color coding
 - Clear icons
 - 1–2 primary colors maximum
-

6. Kid-Friendly Lightweight Illustrations

Kids connect better with visual storytelling.

Use:

- Soft, rounded shapes
- Custom avatars
- Simple gradients
- Familiar shapes: stars, hearts, orbs, treasure chests
- Reward items like hats, capes, pets

In Figma

- Use the **Blobs** plugin
 - Use **Illustration packs** like Toy Faces / Open Peeps
 - Use **LottieFiles plugin for animated icons**
-

Progress Report 2

Jayden Prasad
300367841

7. Simplified Navigation (Tab Bar + Large Buttons)

Parents want simple. Kids want big, tappable items.

Recommended structure:

Tabs for:

- Home
- Tasks
- Rewards
- Character
- Parent Settings

Kids get big colorful icons.
Parents get simple typography.

8. Color System That Appeals to Both Groups

Use a **dual color palette strategy**:

Parent Mode

- Whites, greys
- 1–2 primary colors (soft teal, soft purple)

Kid Mode

- Brighter tones of the SAME primary colors

Progress Report 2

Jayden Prasad
300367841

- Gradients
- Fun accent colors (yellow, pink, aqua)

This makes branding consistent while allowing “kid fun mode.”

9. Accessibility-First Typography

Parents want easy readability.

Suggestions:

- Minimum **16–18px body** text
- 24–32px titles
- High contrast
- Icons with labels
- Avoid cramped layouts

Use Figma’s **Type Styles** to keep consistency.

10. Use Gamified Data Visualization

Keep for kids, optional for parents.

Examples to include in Figma:

- XP bars
- Streak flames
- Level-up popups

Progress Report 2

Jayden Prasad
300367841

- Character growth meter
- Badge collection grid

For parents:

- Simple bar charts
- Weekly completion percentages
- “Most missed tasks” list

If you want, I can create for you:

- ✓ A Figma layout template for HabitHub
- ✓ A full color palette
- ✓ Gamified icons
- ✓ Examples of parent dashboard cards
- ✓ Kid-mode character shop mockups
- ✓ Navigation bar designs
- ✓ Full UI kit (buttons, cards, modals, icons)

Just tell me:

Do you want a dashboard mockup, character screen, task screen, or full UI kit?
